Brief Report on the Event	This Guest lecture focuses on the main advantage of smart materials is that they provide the material with new capabilities without the need for sensors, actuators or electronics. For this reason, it is possible to achieve products that interact with the environment or with people without the need for them to be connected to the electrical grid. Their properties can be changed by exposure to stimuli, such as electric and magnetic fields, stress, moisture and temperature. Modern materials are developed through the invention of new or improved processes, for example as a result of manmade materials/ingredients
